Boat axles with oil lubricated hub

Dear Sirs,

we would like to offer a watertight axle dedicated to boat trailers. This axis is entirely galvanized, which is why the corrosion resistance is much higher. This is particularly important in a salt water environment. This solution does not require additional axle maintenance, because the axle is not only surface protected, as is the case with paint coatings.

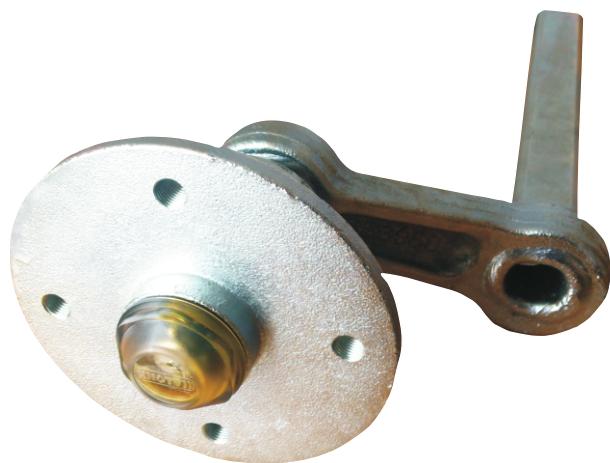

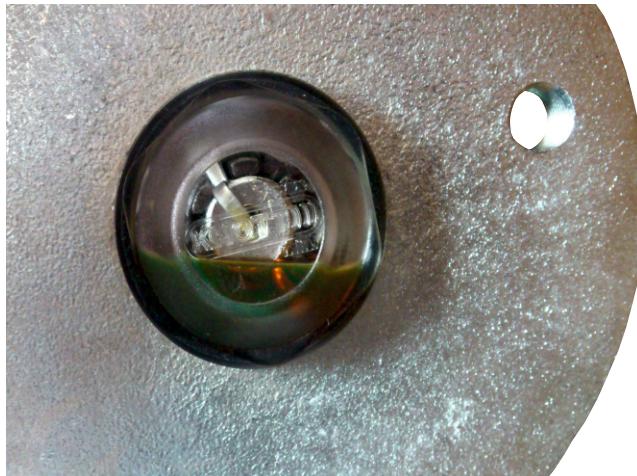

Oil level indicator, thanks to which we can check the amount of oil at any time.

A set of bearings used in oil hubs. They perfectly transfer forces and provide the highest riding comfort.

Boat axles with oil lubricated hub

Hot-dip galvanized axle components are the highest corrosion resistance that can be provided to you. The hub and bearings work in an oil environment, thanks to which they are constantly lubricated and also protected against salt water conditions.

The axles are offered in two unbraked versions up to 750kg and up to 1350kg. At your request, it is possible to make the body with brackets dedicated to the construction of your trailers, but axles come with the "catalog" axle bracket as standard

The hub cover is made of durable plastic.

Allows easy control of the oil level in the hub, thanks to the minimum and maximum level indicators.

Art. Nr	Type	DMC
YA0109.xxx	VG7U	750 kg
YA0150.xxx	VG13U	1350kg
