Spare wheel bracket

knott.pl

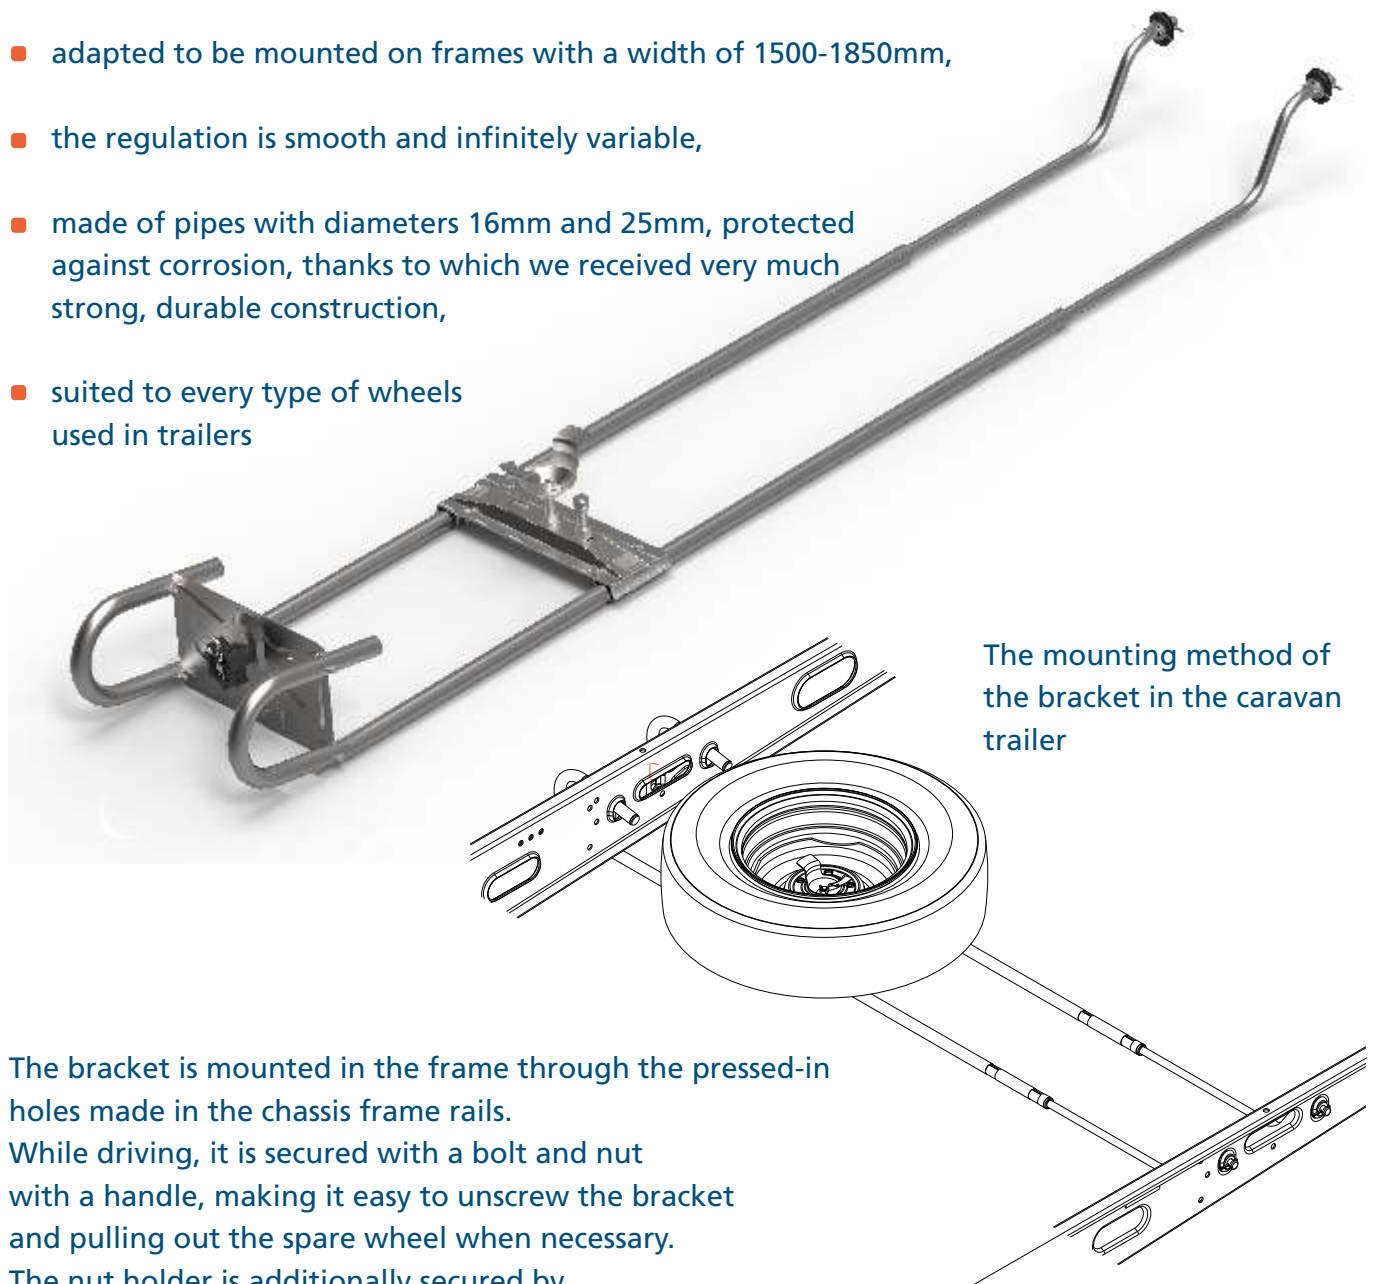

Dear Sirs,

To meet the expectations of the market, we would like to offer you a universal spare wheel bracket designed for use in caravans. The decisive advantage is the possibility of using as part of our company's components as well as our competitors.

- adapted to be mounted on frames with a width of 1500-1850mm,
- the regulation is smooth and infinitely variable,
- made of pipes with diameters 16mm and 25mm, protected against corrosion, thanks to which we received very much strong, durable construction,
- suited to every type of wheels used in trailers

The mounting method of the bracket in the caravan trailer

The bracket is mounted in the frame through the pressed-in holes made in the chassis frame rails.

While driving, it is secured with a bolt and nut with a handle, making it easy to unscrew the bracket and pulling out the spare wheel when necessary.

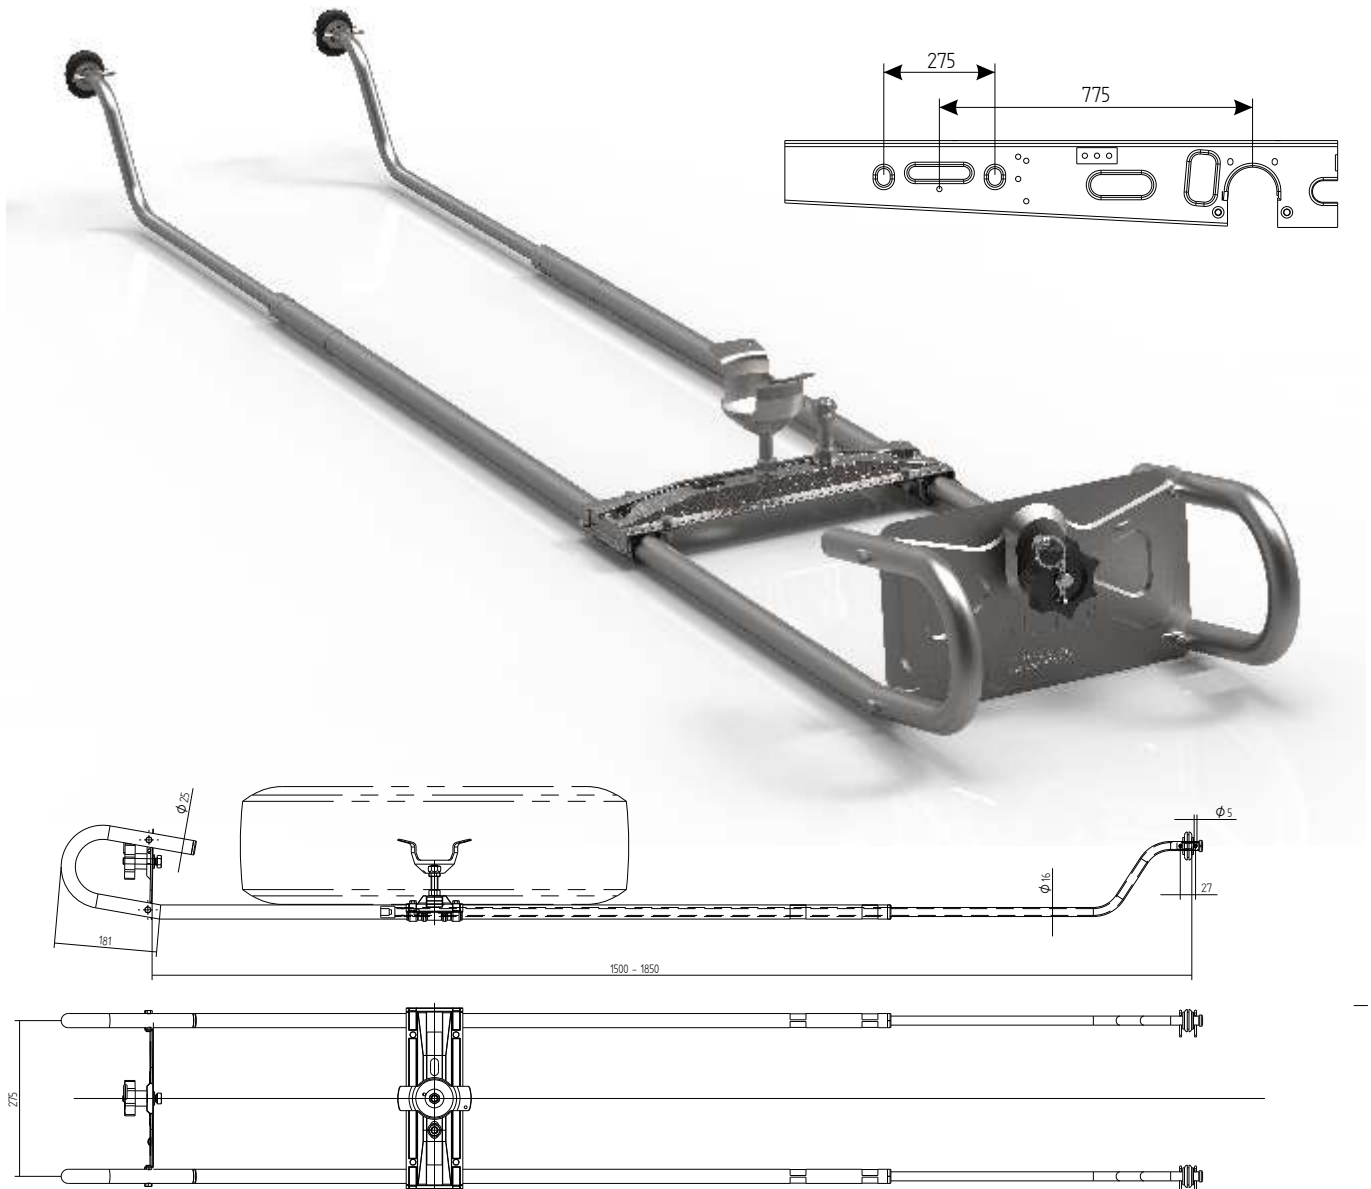

The nut holder is additionally secured by a cotter which is designed to prevent unscrewing during vibrations accompanying the drive with the trailer.

The wheel is attached to a special plate through a nut that uses the center hole of the rim to be set and protection while driving.

At the moment when we have an emergency situation on the road, the spare wheel can be easily extended on the bracket from under the trailer's chassis and the wheel can be easily removed from the bracket.

This is the perfect solution to save space without having to sacrifice the safety of a spare wheel when traveling with a caravan trailer.

Art. Nr. 421241.001
