

Dear Sirs,

We would like to inform you that the support wheel console dedicated to KFGL35-A devices has been modified and will now be offered in a "skewed" version by 15 degrees. This position allows the support wheel to be mounted as close as possible to the longitudinal axis of the trailer while maintaining a safe distance between the wheel and the brake rod. This solution allows you to focus less on the position of the wheel forks when lifting the wheel to the driving position without the risk of damaging the brake rod.

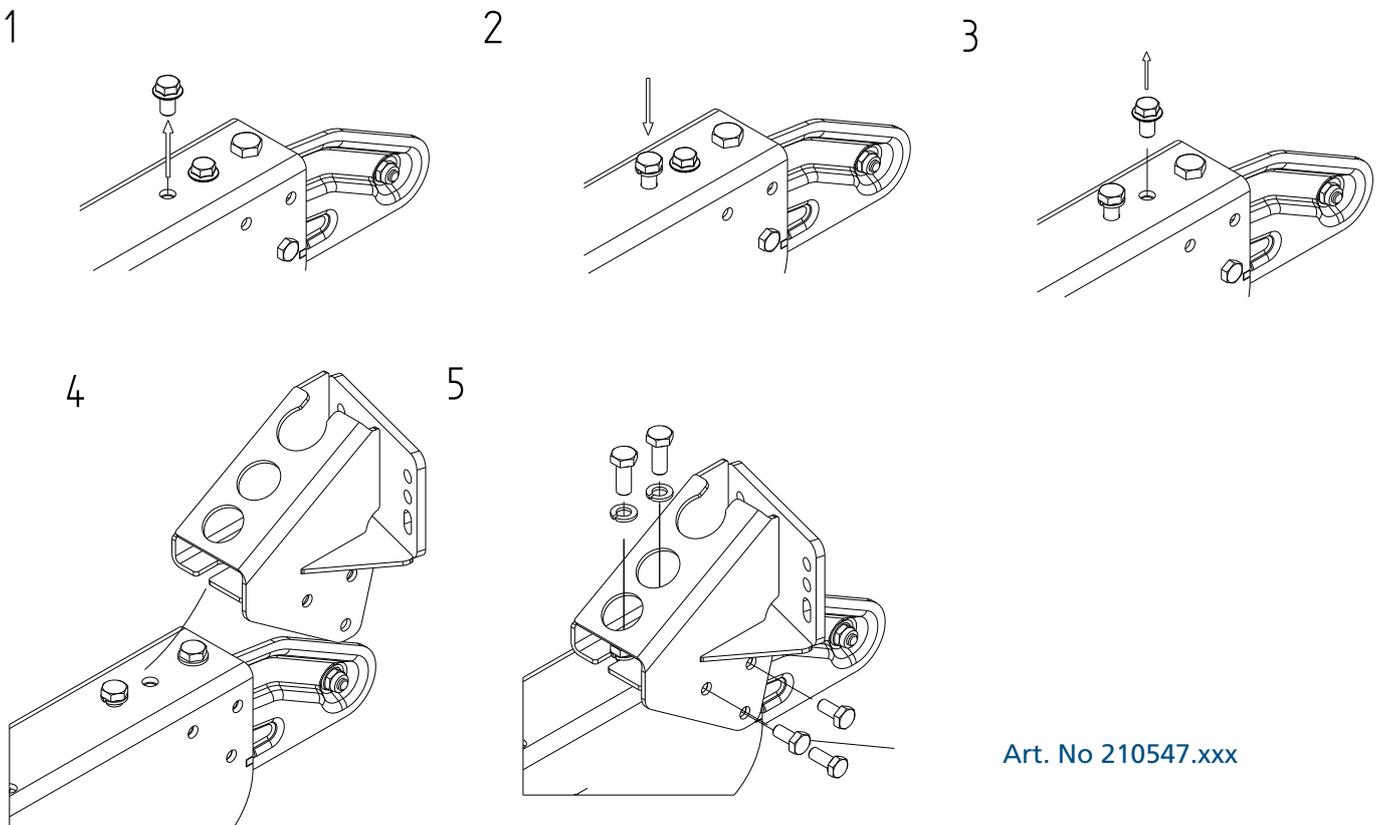

Art. No 210546.xxx

The overrun device can be equipped with a console at every stage of the product's life.

Fixing a new type of console to the device is similar to the previous version, so it is possible to replace the old console with a new one.

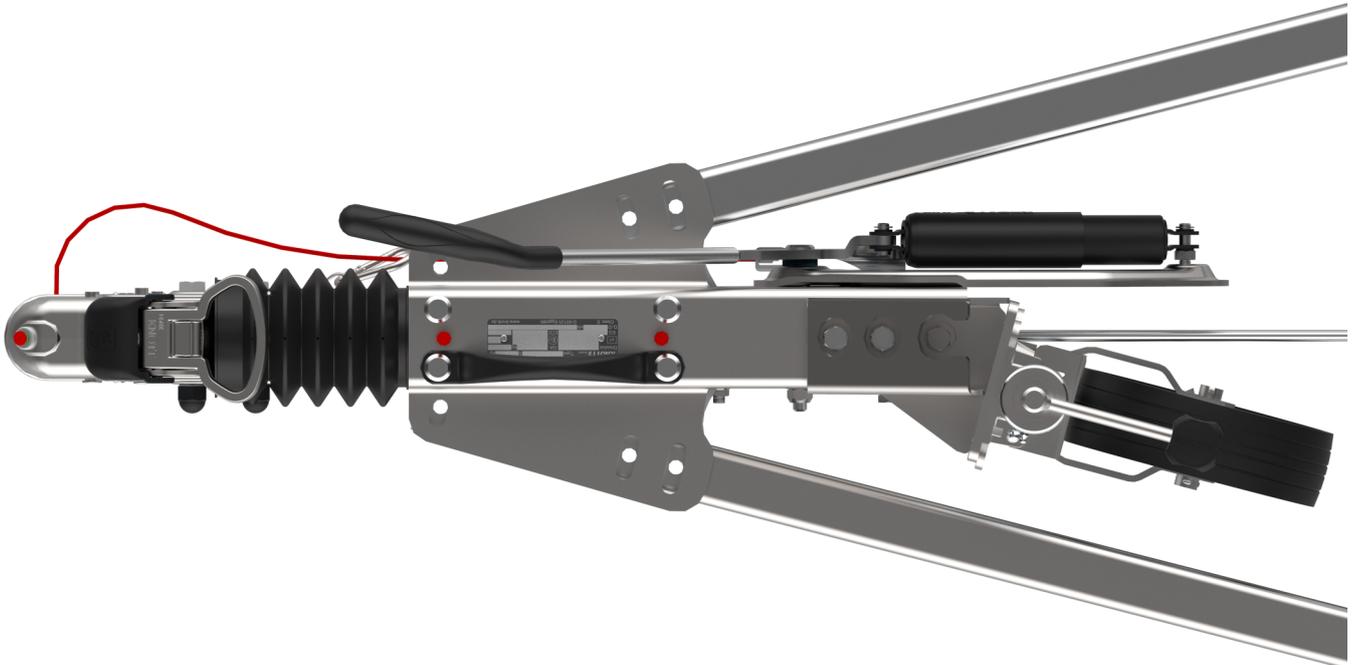

Below we present the method of mounting the console on the casing of the overrun device.

Art. No 210547.xxx

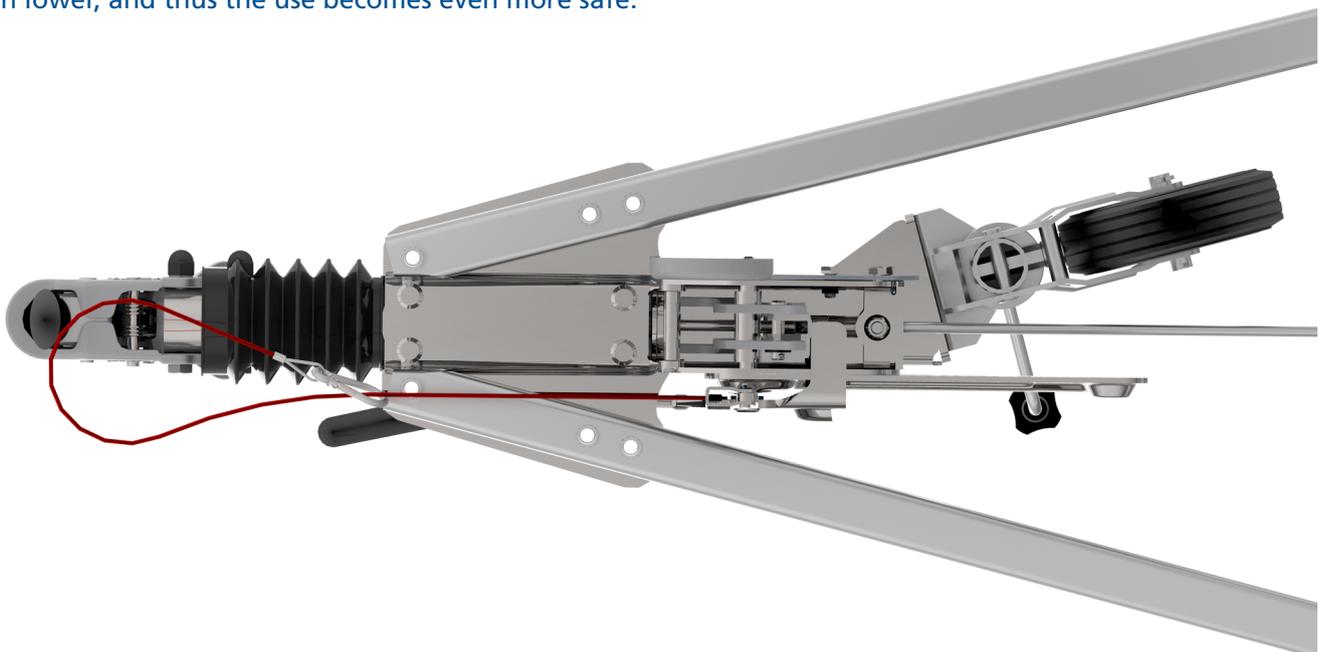

A new type of console allows you to bypass the brake rod when lifting the support wheel.

The photo below shows the new console on the overrun device in top view.

Below we present an example of the use of the device with a new type of bollard in the view from the bottom of the trailer.

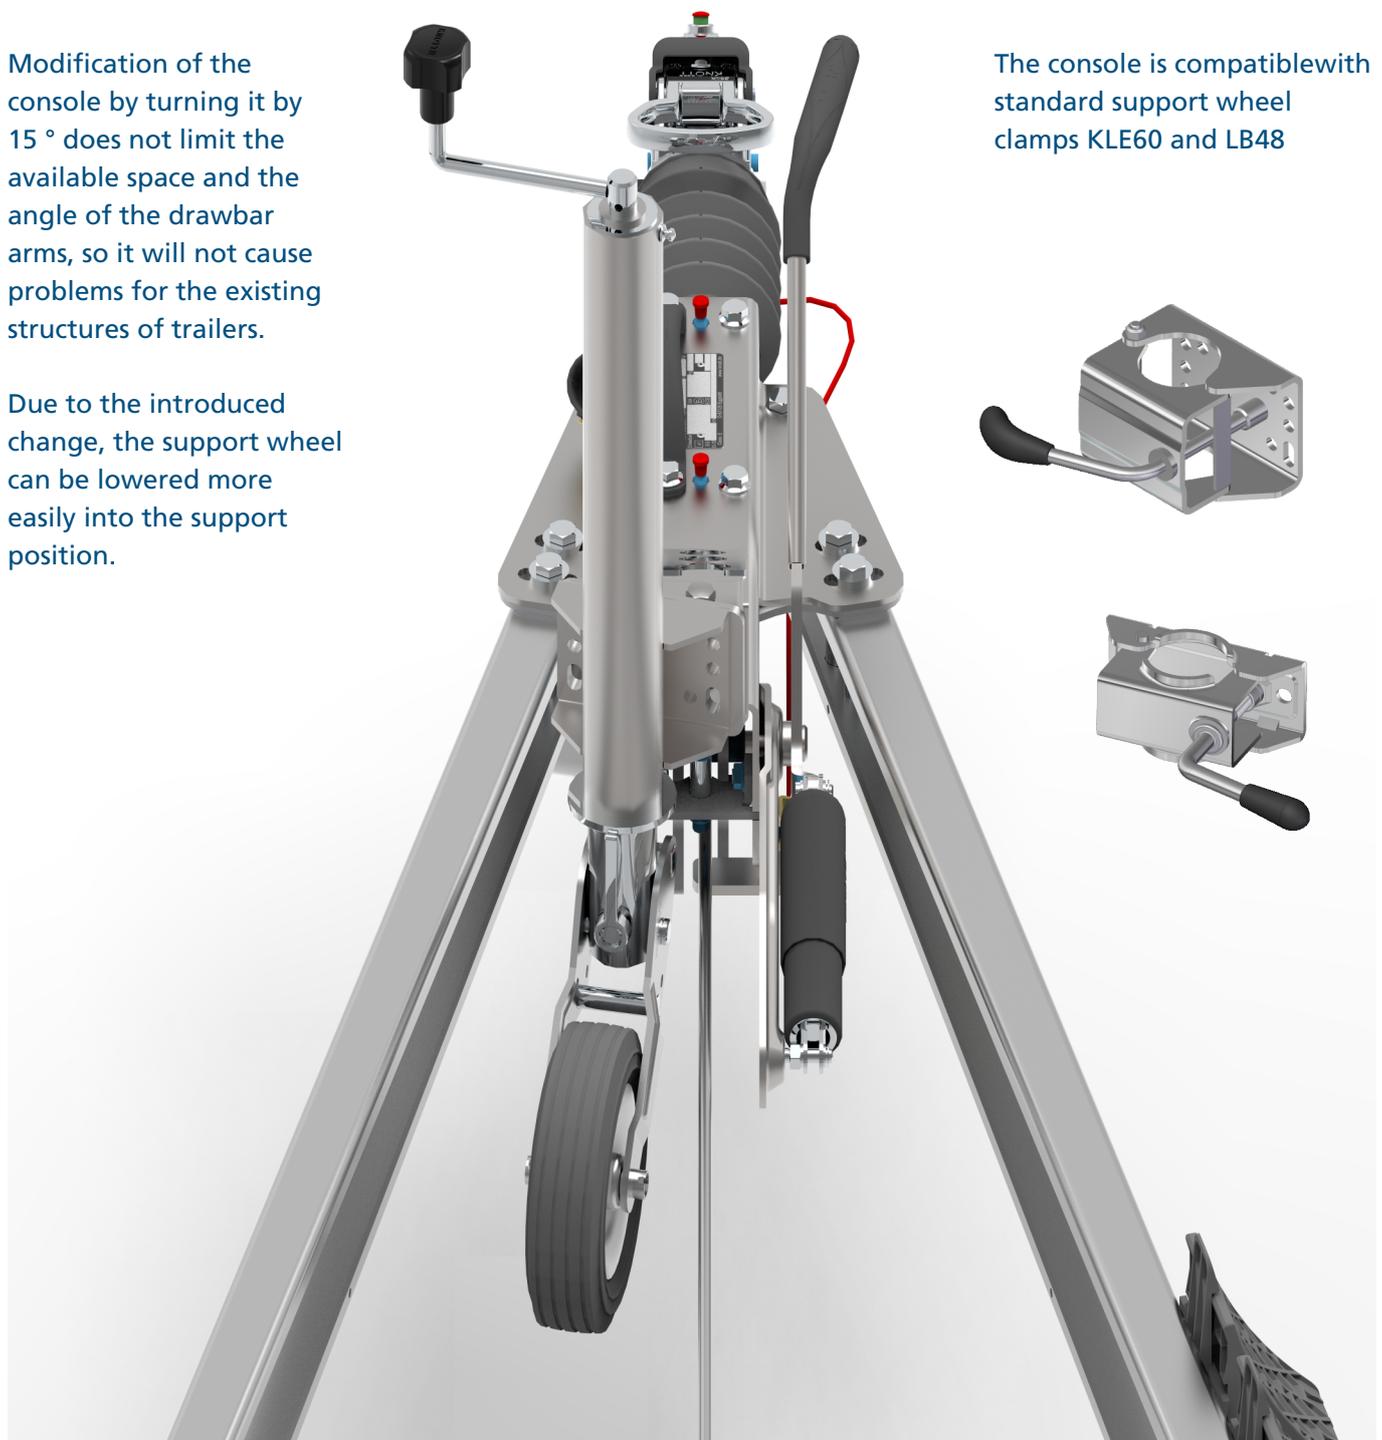

It is clear that thanks to the console adjustment by 15 degrees, the risk of a collision with the brake rod is much lower, and thus the use becomes even more safe.

Modification of the console by turning it by 15 ° does not limit the available space and the angle of the drawbar arms, so it will not cause problems for the existing structures of trailers.

Due to the introduced change, the support wheel can be lowered more easily into the support position.

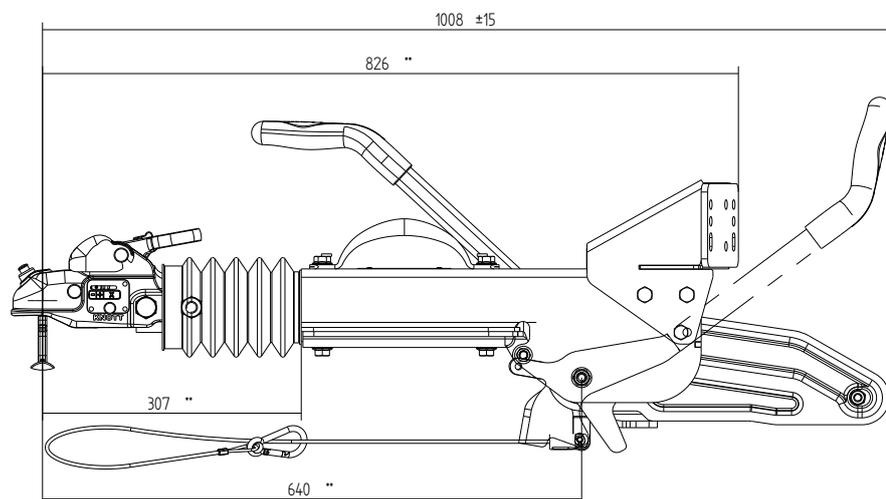

The console is compatible with standard support wheel clamps KLE60 and LB48

The ATK60 support wheel in the position supporting the trailer shows that there is no possibility of damage, bending or only contact of the brake rod with the wheel.

Thanks to this, we are sure that the braking system is safe and always well-adjusted.

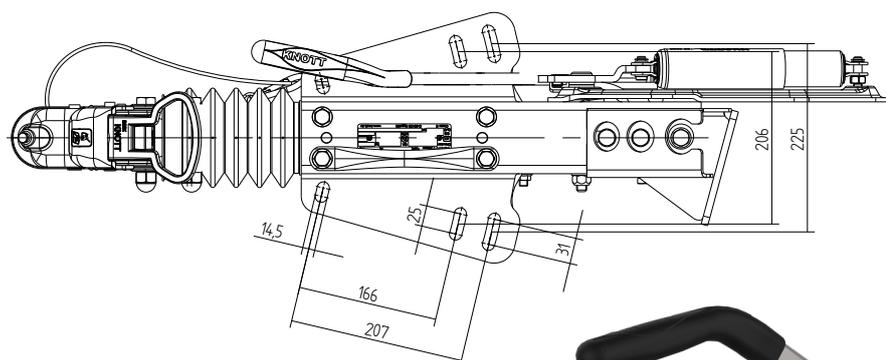

KFGL35-A overrun devices with console are also offered with the new version of the console. We encourage you to contact the representatives of the sales department for details.

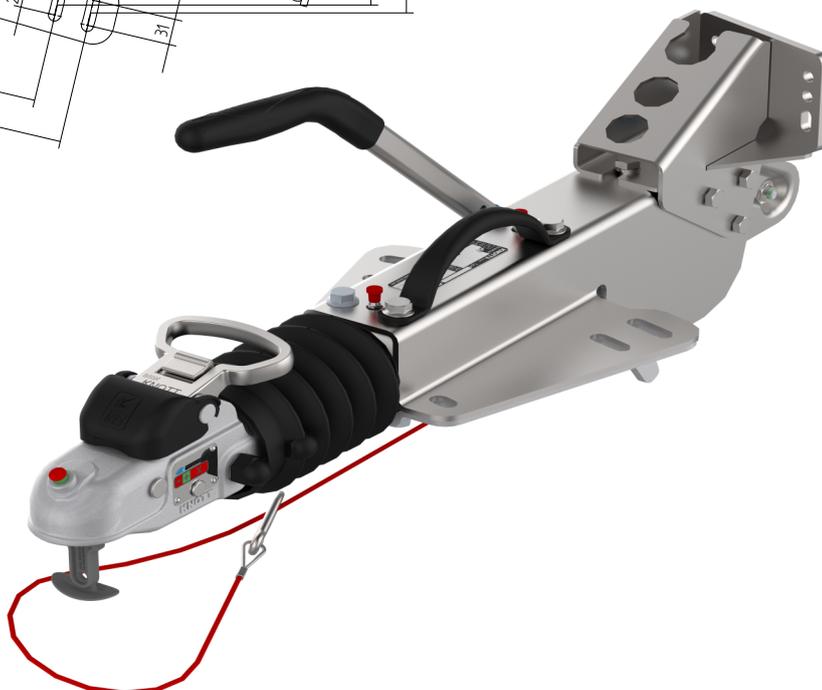

KFGL35-A overrun device with a console set at an angle of 15 degrees.

The console, apart from changing the position, has the same parameters as the previous versions.

The connection of the support wheel console is identical, thanks to which it is possible to install the same support wheels as in any other KNOTT overrun device.
