Overrun coupling devices KFG35-D

knott.pl

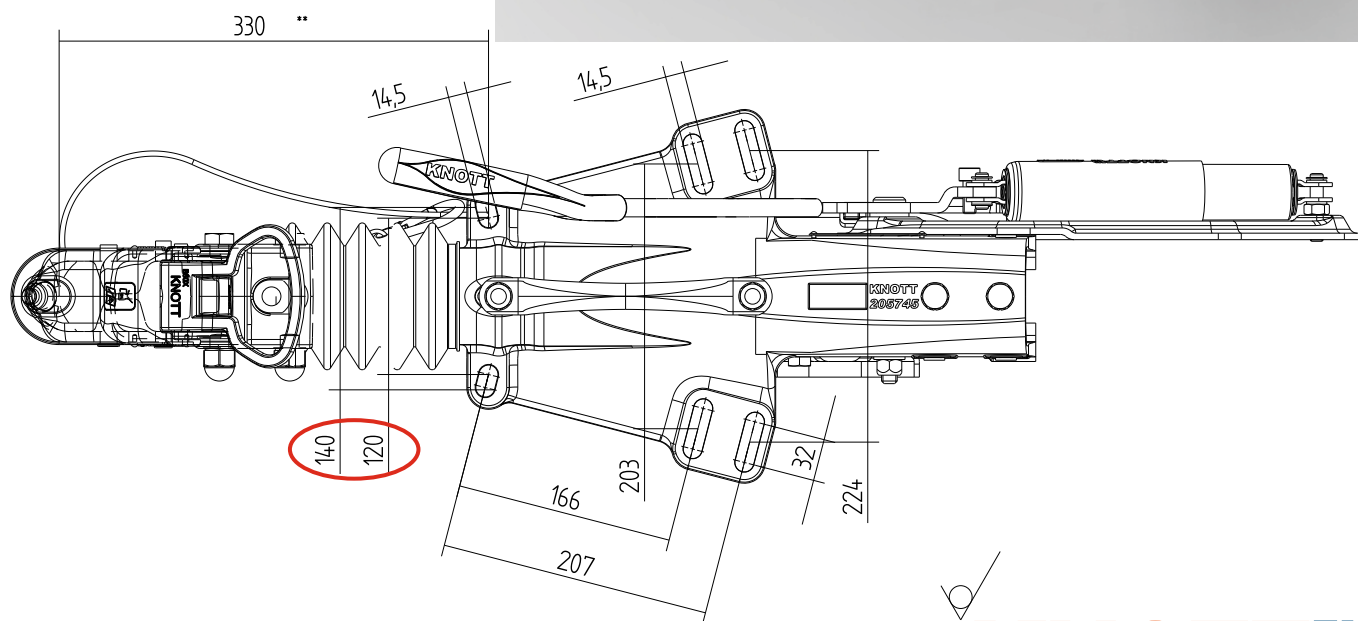

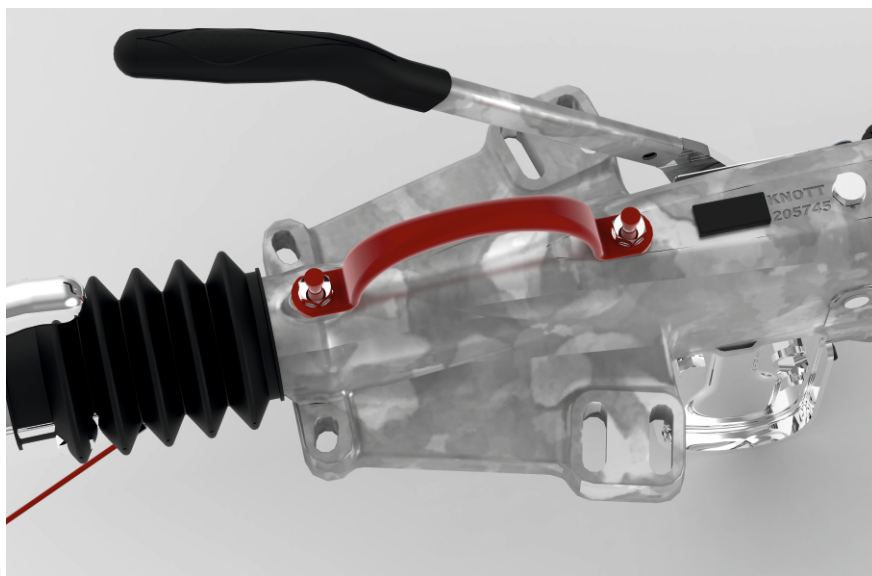

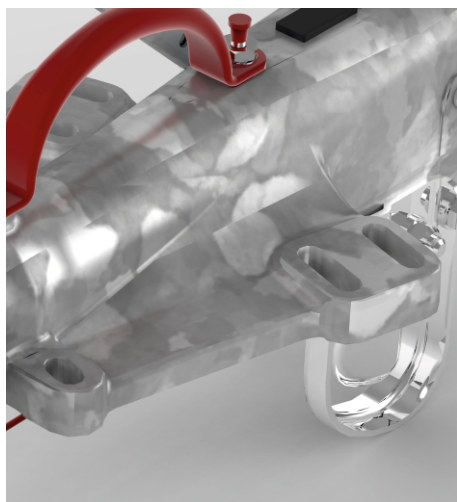

Dear Sirs,

We would like to inform you that we have introduced changes in the housing of KFG35 overrun devices. This change consists in extending the front dimension of the connection to 140mm.

The currently produced KFG35 overrun coupling devices will be offered with front beans with 120-140mm connection spacing, i.e. spacing compatible with other companies on the market

This change allows you to flexibly replace the overrun device with a Knott product and assemble them on each drawbar available on the market (AL-KO, BPW, ...)

From now on, any trailer, even those equipped with subassemblies of other companies operating on the market, can be equipped with the Knott brake system without any changes.

For more details please contact Sales Department KNOTT Sp. z o.o.
