KRV17 Overrun coupling devices - Change of approval number

knott.pl

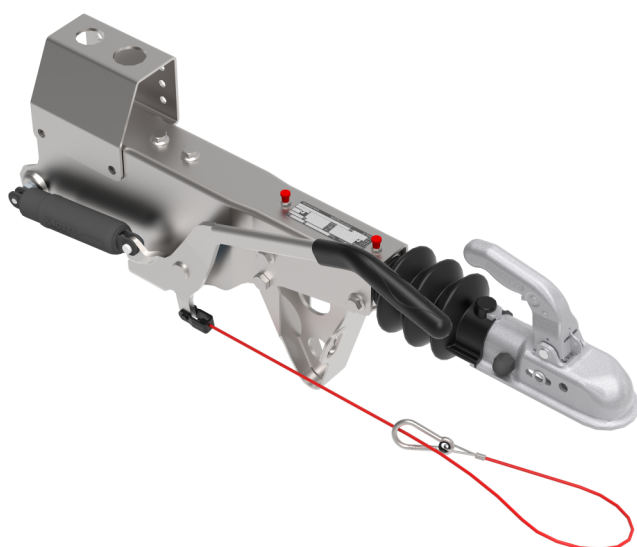

Dear Sirs,

We would like to inform you that in connection with the applicable regulations and as a result of the extension of the approval of KRV17 overrun coupling devices, the marking of devices is also changing.

E1*55R02/01*1010*03 (marking **E1 55R-02 1010**).

The aforementioned modification is a result of changes introduced by certification bodies in the approval procedures. The actual approval number 1010 remains unchanged, but in light of the changes, it is required to mark the manufactured components with a consecutive approval extension number, therefore the digits before the number 1010 change. This number identifies the series / version of the ECE R55 regulation.

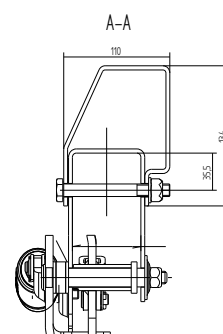

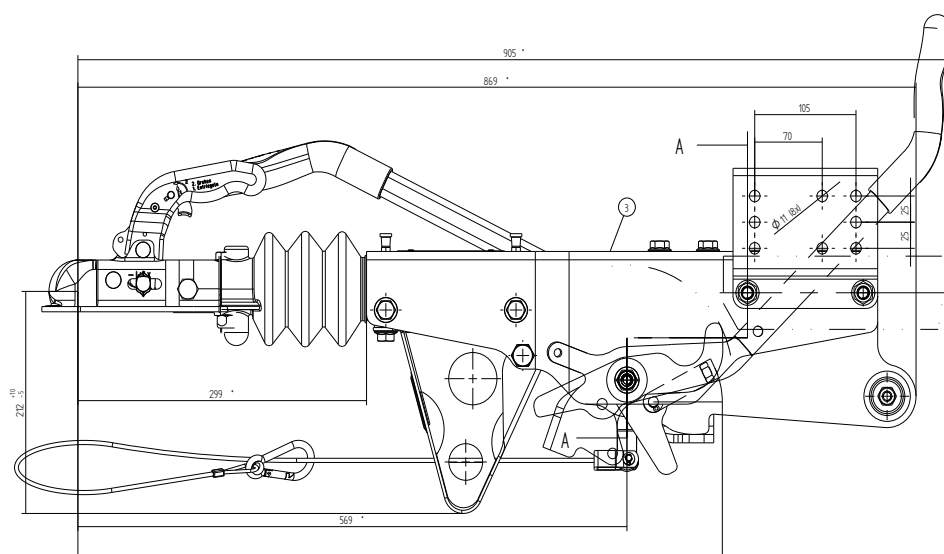

Please be advised that the approval extension with technical novelties and a few improvements is based on the new version of the regulations of the ECE R55 (version 2) regulation, and according to this version, the information about the approval extension number is required on the product.

The old approval number will be valid until stock finishes. Currently, production is preparing for the new marking and the new equipment will be marked in line with the update of the ECE R55 regulation.

Please include this change in your approvals in order to avoid problems and misunderstandings after the transition period.

E1*55R02/01*1010*03 (marking E1 55R-02 1010).
