Aluminum ramps

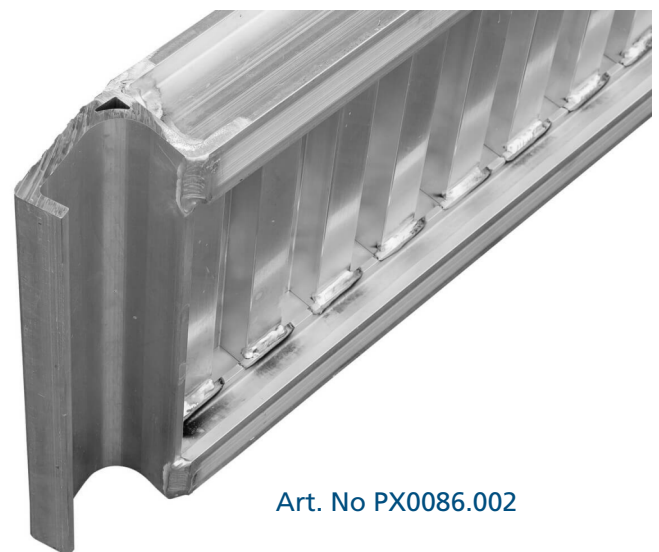

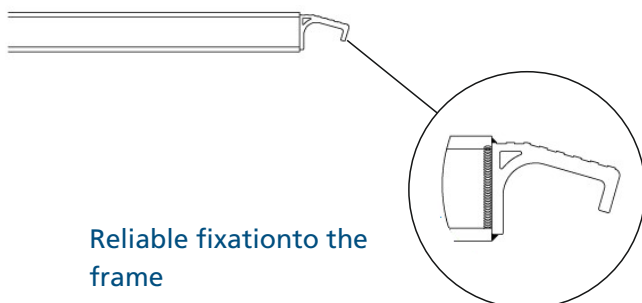

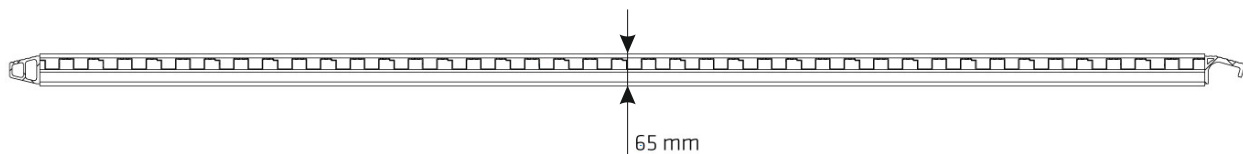

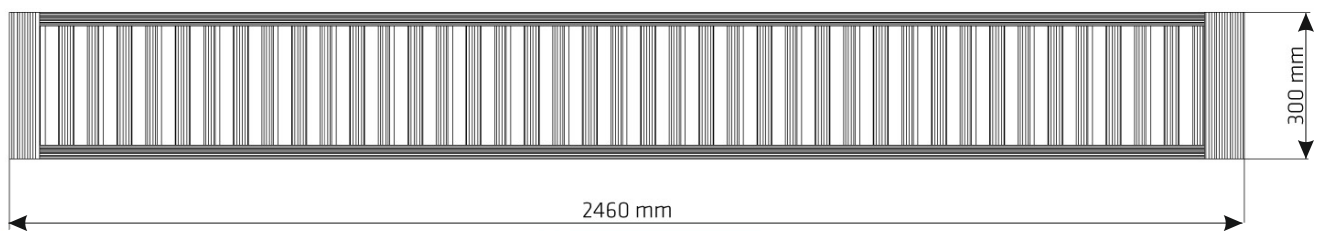

knott.pl

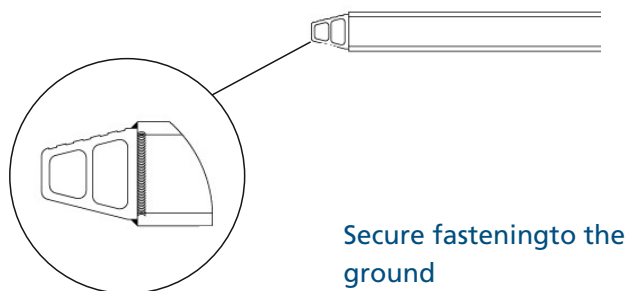

Dear Sirs,

we present aluminum ramps for tow trucks and tow trucks. Ramps are made with the utmost care, in accordance with the standards, thanks to which you receive a high-quality product that will certainly meet your expectations.

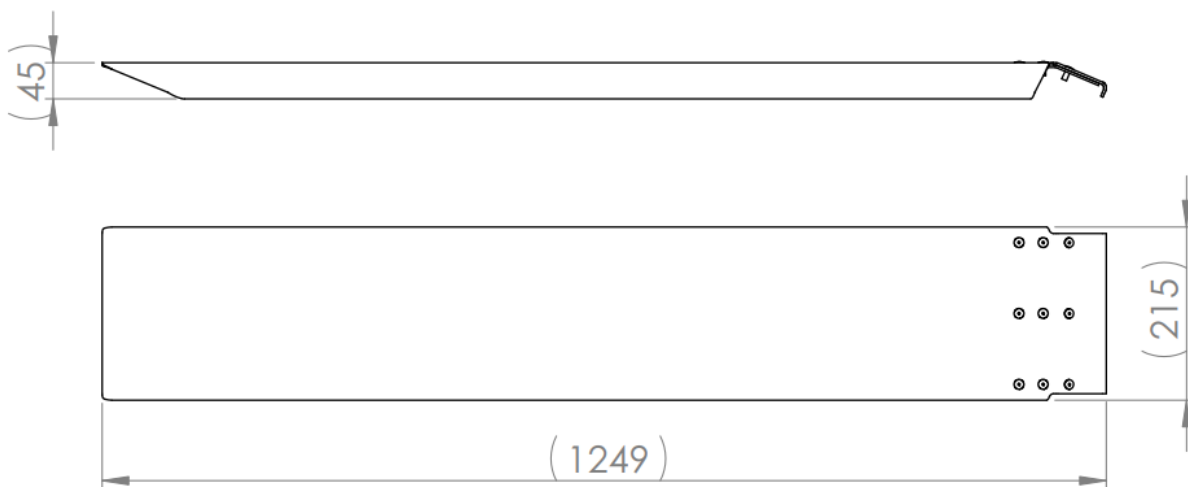

The first of the ramps with a length of 2460 mm and a width of 300 mm is a ramp designed for trailers with a maximum GVM of 3000 kg. The end of the driveway allows you to hook it into standard structures available on the market. The other end has an end that provides a safe and firm support on the ground. The driveway has ribs that increase the traction of the wheels, making it an ideal solution for trailers and tow trucks.

An example of the use of ramps in a tow truck.

The ramps have an additional marking specifying the maximum pressure, width of the wheels and the height of the ramp as well as the length of the vehicle that will drive onto the trailer.

Maintaining the abovementioned obligations guarantees safe loading.

Ramps mounted under the loading surface of the tow truck can also be very easily secured when driving with a trailer.

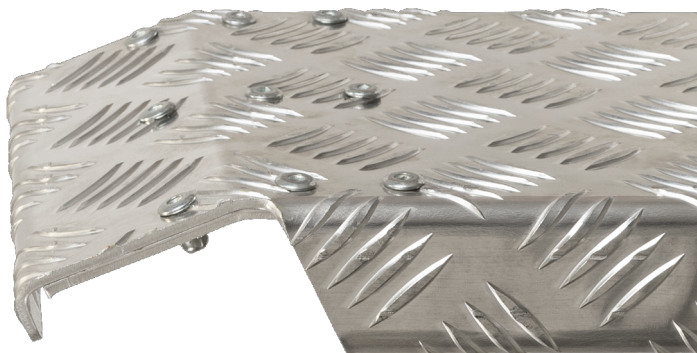

Hooking the ramps on the trailer with the plywood floor is as easy as with the tow trucks.

The mount is standard and compatible with vehicles available on the market.

The aluminum ramp, thanks to its low weight, does not significantly reduce the load capacity of the trailer, and the compact structure ensures high quality. Thanks to the use of one piece of aluminum, we avoid overheating the material in the places of joining, hence the very high strength and durability of the product.

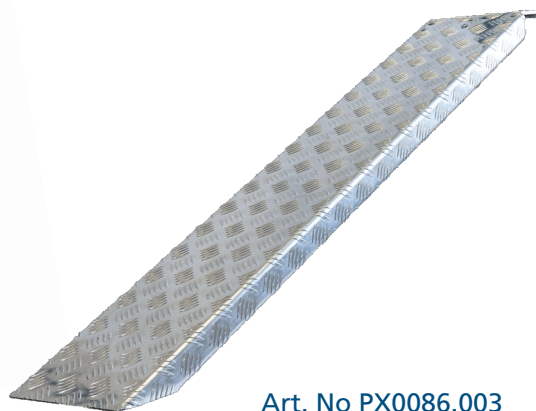

The mounting to the frame has been additionally strengthened, thanks to which we obtain secure mounting and safety during loading and unloading.

Regardless of which of the driveways interested you, please contact us and purchase. Colleagues from the Sales Department will surely answer your questions. High quality and a guarantee of satisfaction are what should convince you to use our ramps.
