Square support foot TL60

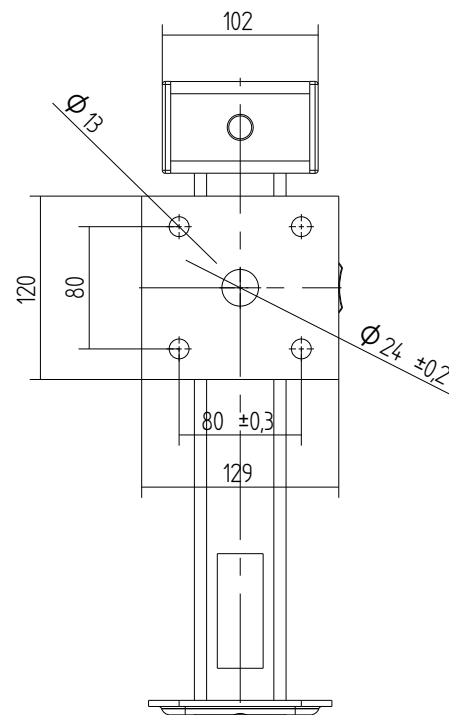

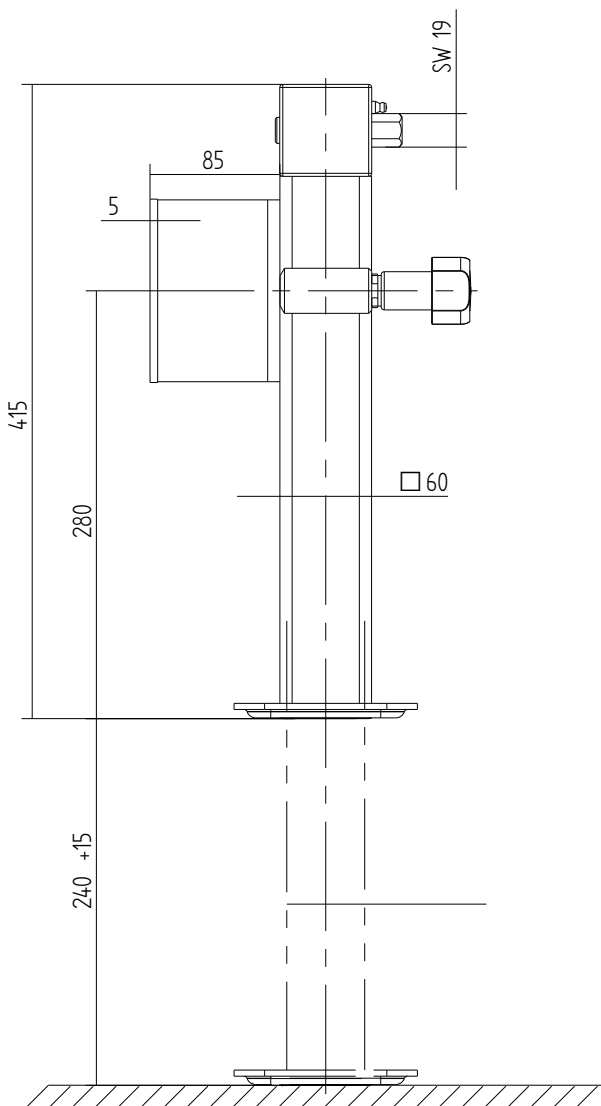

knott.pl

Drodzy Państwo

Below we present the TL60 support, which can be rotated while driving, thanks to which we do not limit the clearance under the frame while driving. When standing still, we turn the support to the working position and can adjust it using a crank or a SW19 wrench.

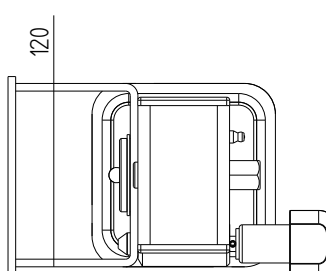

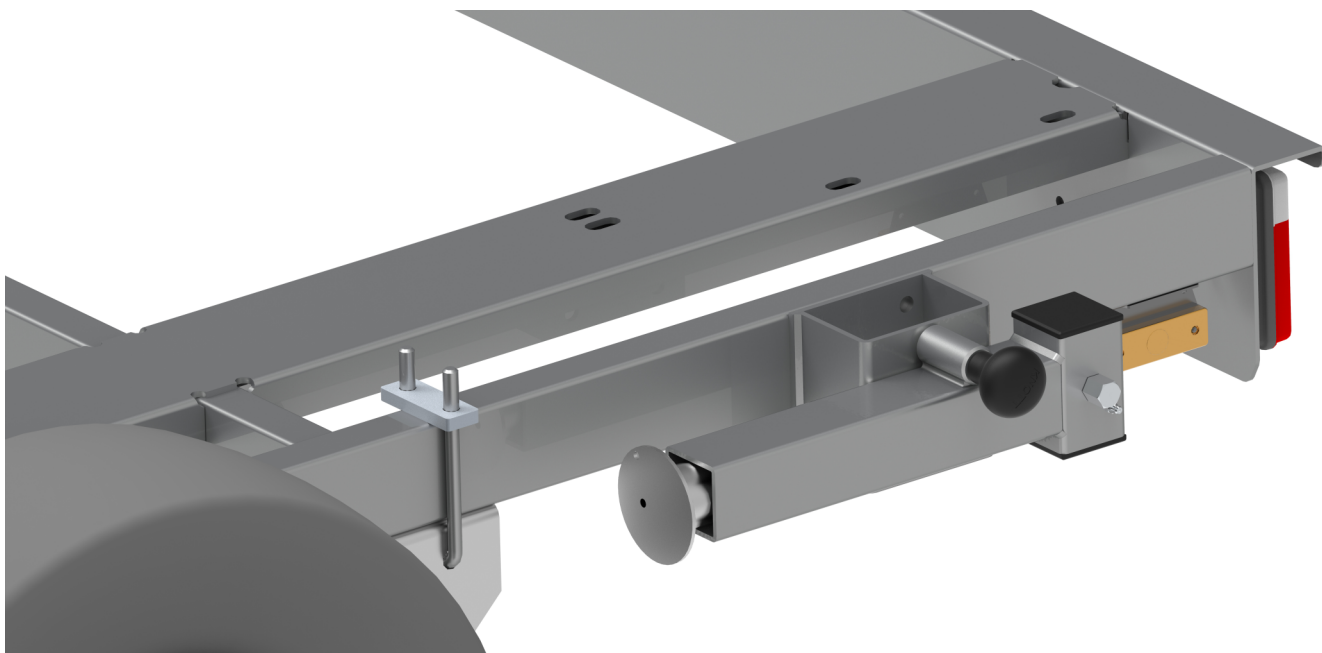

The offered support is very aesthetic and durable. Thanks to the spring protection, the support cannot rotate on its own, which makes its use very safe.

The whole thing is protected against corrosion by galvanizing. fire protection, which provides the highest possible protection against weather conditions.

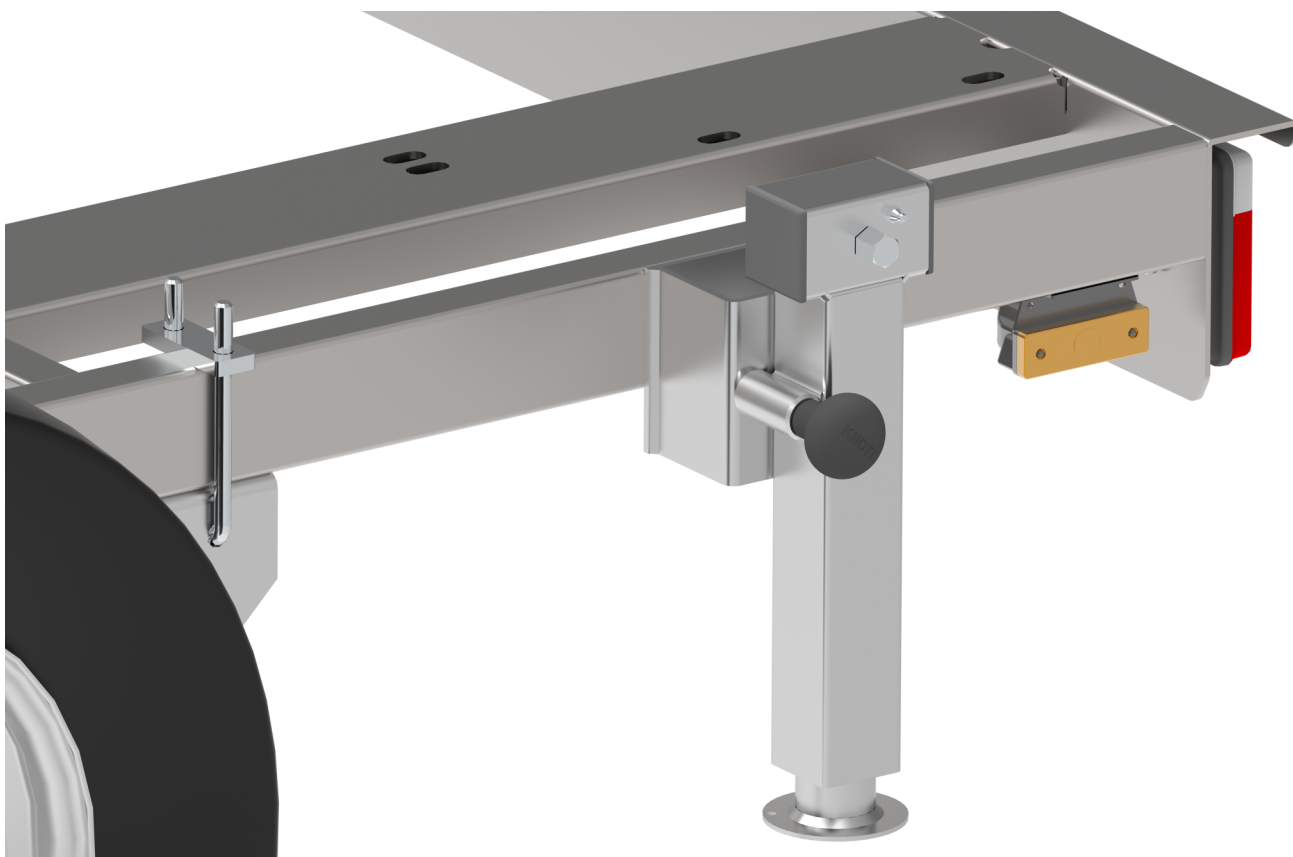

The jack stand is for support and stabilization and should not be used to lift the trailer and its load.

The maximum static permissible load on the support is 1300kg.

Above, the support is in the driving position, so that the ground clearance is not reduced.

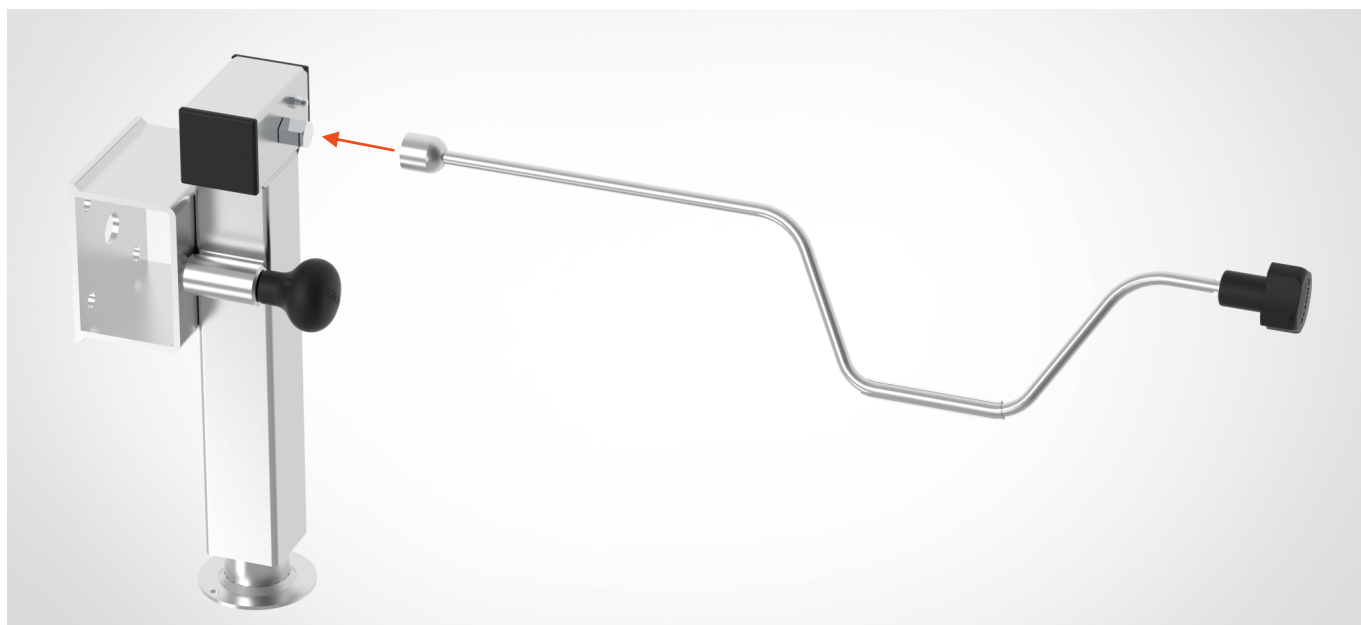

Above, the support is turned to work. This solution reduces the required support stroke, which gives us greater strength with smaller cross-sections

The offered support can be used in all types of trailers. It is an ideal solution for utility trailers for transporting mini excavators.

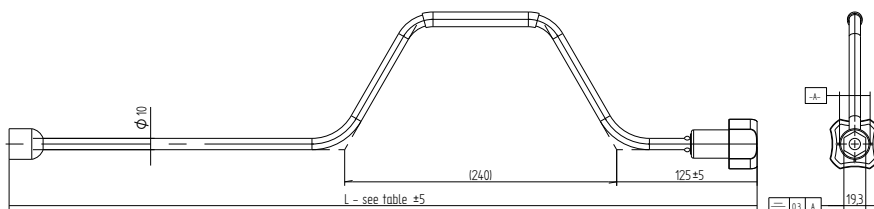

Thanks to the adjustability of the support, we can adapt it to the prevailing conditions on the construction site.

The support is equipped with a console that allows rotation. The console is attached directly to the frame with 4 screws. The mounting spacing is selected similarly to supports available on the market with a similar load capacity. Thanks to this, the support can be used instead of the ones you have in your trailers.

In the case of the offered support, it is necessary to use a key or crank with an appropriate socket. Our offer also includes a solution in the form of a crank that allows you to easily adjust the height of the TL60 support.
