Waterproof bearings

knott.pl

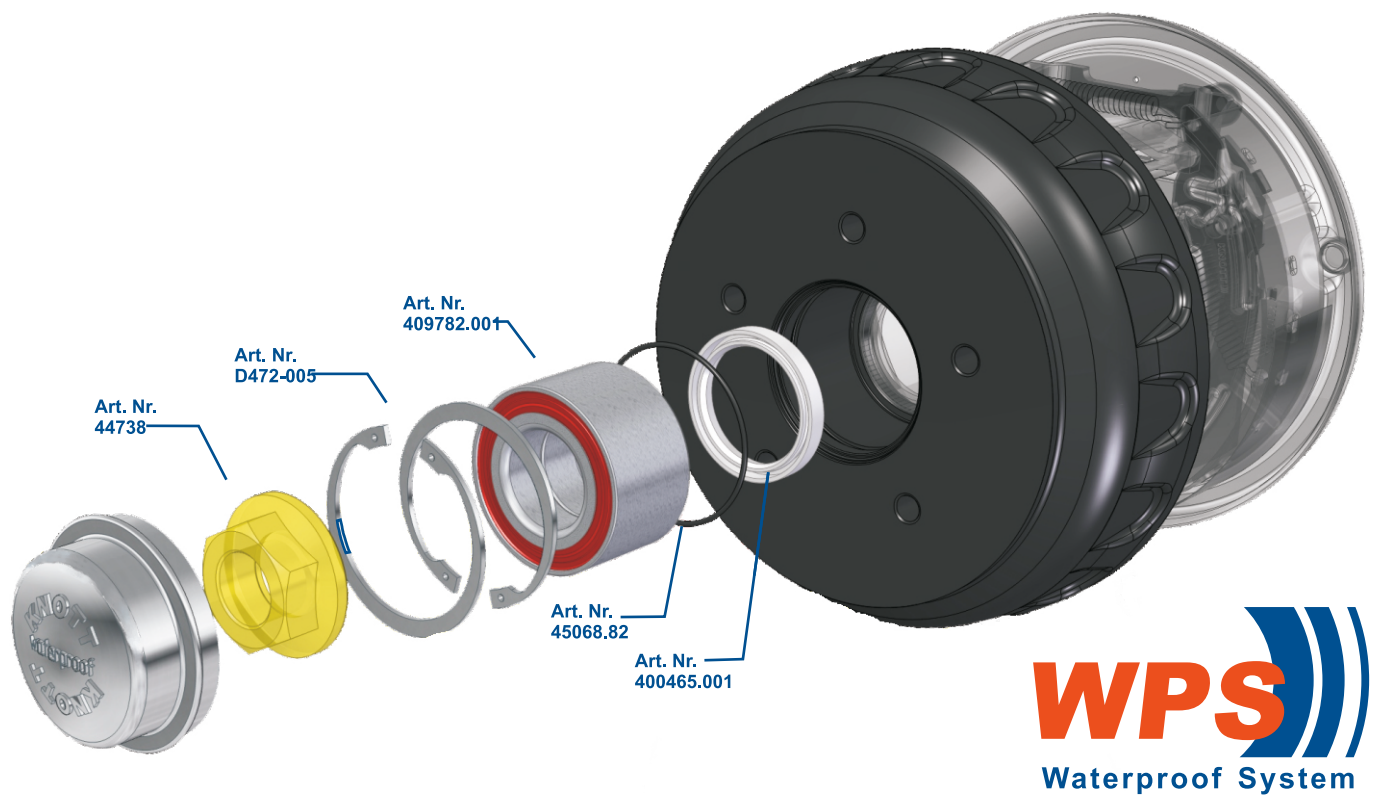

Dear Sirs,

To ensure the highest durability and strength of the boat axles, we use waterproof bearings. This is to reduce the amount of water penetrating inside, and thus reduce the risk of corrosion.

If you are a user of watertight axles, remember that replacing the bearing with a standard one reduces the service life of the entire axle, so we encourage you to use waterproof bearings.

Below we present a general diagram showing the components of a watertight hub.

Only original Knott bearings guarantee the reliability and durability of the hub drums and complete axles working in a humid environment.

The service kit is a set of seals and a waterproof bearing.
Additionally, the set includes a cap which, due to its specificity, cannot be used multiple times.

Art. Nr	Nazwa
410250.001	Waterproof bearing 200x50 set
410250.002	Waterproof bearing . 250x40, 200x50/10"

Detailed information about the products is provided by the Sales Department KNOTT Sp. z o.o.
