Safety Base

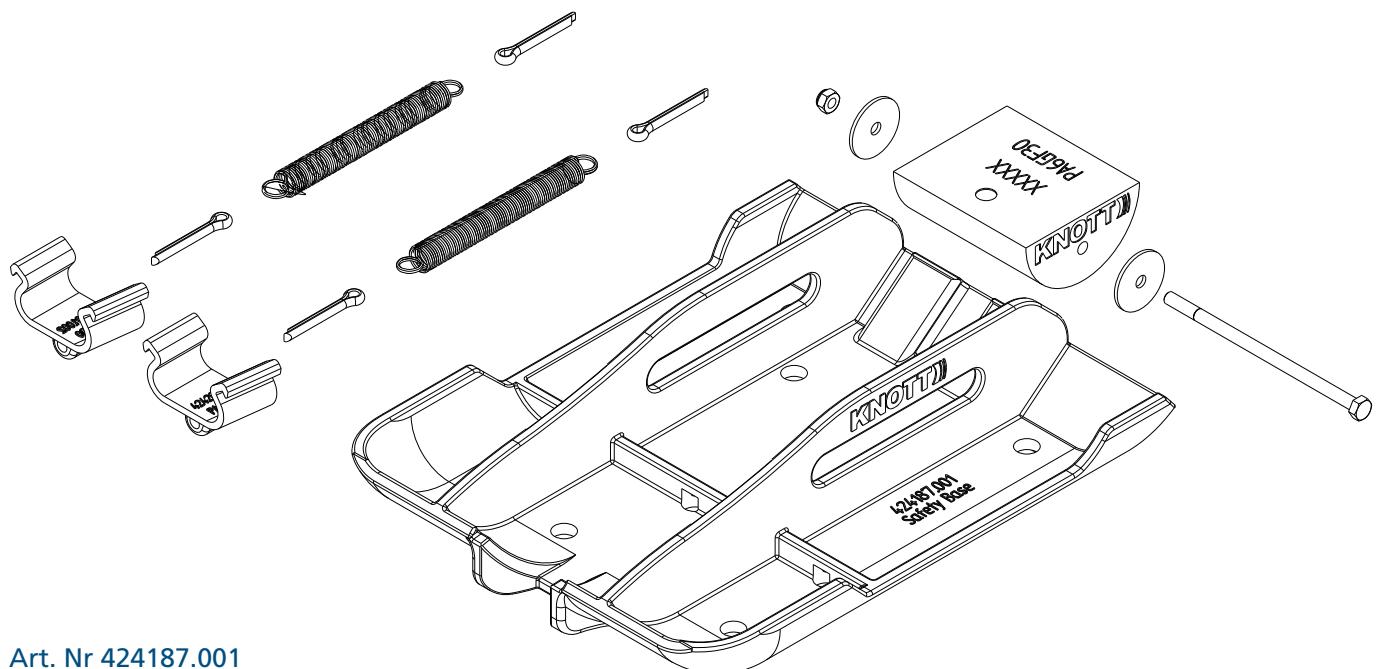

knott.pl

Dear Sirs,

we would like to present you special pads for folding supports, used mainly in caravans. The offered supports are made of high-quality plastic, thanks to which their life and durability is really long. The offered supports are designed for folding supports and are designed to increase the contact surface with the ground, so that the support foot does not sink into the boggy ground. This is extremely important for caravans that are parked on unpaved terrain.

Art. Nr 424187.001

The Safety Base will be offered in sets for 4 supports, along with all fasteners needed to attach them to the chassis. Thanks to their construction, they will be compatible with all supports available on the market. Compatibility is to ensure the possibility of mounting in any caravan equipped with folding supports, thanks to which it will be available for each trailer, regardless of the manufacturer or production date.

The set includes elements that allow you to quickly install the SafetyBase on the supports, thanks to which you can mount the feet on the trailer without any additional tools.

The unique solution of fixing the foot ensures that the support is firmly fixed to the ground.

The feet are equipped with a spring that keeps the SafetyBase in the closed position while driving, thanks to which the noise level is much lower than in similar solutions available on the market.

An additional advantage of the offered solution is the fact that the special structure allows for "tightening" the support without damaging the foot by dragging it over the ground.

Detailed information about the products is provided by the Trade Department of KNOTT Sp. z o.o.
